## Subject Index

- Adsorption, 203, 297, 339  
Adsorption kinetics, 75  
Aggregation, 1, 45  
Alkaline-earth cations, 283  
Alkylamine, 255  
Aluminium oxide, 297  
Amino acid, 203  
Amorphous zirconium oxide, 283  
AOT, 45  
Application of theoretical models, 75  
Autocorrelation, 141  
  
Cation exchange capacity, 327  
Cellophane surface, 157  
Chain compatibility, 193  
Chelating material, 239  
Classical light scattering, 213  
Clay minerals, 327  
Coated ruthenium particles, 63  
Colloid stability of foams, 21  
Colloidal ruthenium, 63  
Colloids, 1  
Conformation, 141  
Contact angle, 255  
Copper(II), 239  
Cosolvent metalworking fluid, 297  
Counter-ion, 213  
Critical micelle concentration, 255  
Crude oil, 127  
Curved interfaces, 271  
Cylindrical pores, 115  
  
Debye effect, 177  
1-Decanol, 339  
Demulsification, 177  
Demulsifier, 127, 177  
Di(2)-ethylhexylphosphoric acid, 45  
Dipalmitoylphosphatidyl choline monolayers, 85  
Direct contact heat transfer, 99  
Dispersion of alumina, 231  
Duplex film approach, 193  
Dynamic light scattering, 213  
  
Electroacoustic, 177  
Electrodes, 327  
Electrokinetic non-polar media, 177  
Emulsion treatment, 177  
  
Energy of interaction, 115  
Enhanced, oil recovery, 21  
Extraction,  
    solvent, of metal ions, 45  
  
Flotation, 255  
Flow-induced deposition, 157  
Fluid-interfaces, 75  
Fluid surfaces, 99  
Fluorocarbon surfactant, 231  
Foam-flooding, 21  
Fractal dimension, 1  
  
Graphite, 339  
  
Haematite, 1  
Hemi-micelle, 255  
Heptane, 339  
Hydrodynamics, 141  
Hydrometallurgy, 45  
  
Interface, 141  
Interfacial properties, 225  
Interfacial tension, 99  
Interferometry, 99  
  
Kelvin's equation, 271  
Kinetics, 1  
  
Lamellar liquid crystalline phase, 127  
Lanthanum diethanolamine, 239  
Light scattering,  
    dynamic, 45  
Liposome-monolayer interaction, 85  
Liquid lens, 99  
Liquid/liquid separation, 177  
  
Micelles, 213  
Microemulsion,  
    water-in-oil, 45  
Microemulsions, 193  
Mixed monolayers, 85  
Mixed-oxide gel, 203  
Model aqueous fluid, 297  
  
Particle size,  
    of metal-extractant aggregates, 45  
Particle size analysis, 1

- Phosphatidylinositol monolayers, 85
- Phospholipid transfer from liposomes, 85
- Photon correlation spectroscopy, 1, 45
- Polyelectrolytes, 157
- Porous, media, 21
- Porous solids, 271
- Potentiometric titration, 283, 327
- Precipitation of ruthenium compounds, 63
- Protein, 141
  
- Quartz, 255
- Quaternary ammonium salts, 213
  
- Raoult's law, 271
- Reverse hemi-micelle, 339
- Reversed micelles, 45
- Ruthenium composite solids, 63
- Ruthenium dispersion, 63
- Ruthenium oxide dispersions, 63
  
- Semi-infinite slab system, 115
- Silica-alumina, 203
- Silica coating, 63
- Silica-magnesia, 203
- Silica-titania, 203
- Sorption equilibria, 239
  
- Spherical particles, 115
- Spreading coefficient, 99
- Stability, 127
- Straight chain hydrocarbons, 193
- Supra-self assembly, 213
- Surface tension, 99
- Surfactant, 21, 75
- Surfactant association, 127
- Surfactant systems, 297
  
- Thermophysical properties, 99
- Thickness measurement, 99
- Titanium dioxide particles, 157
  
- Ultrasonic vibration potential, 177
  
- Van der Waals interaction, 115
- Vapour pressures, 271
- Vesicle-micelle equilibrium, 213
- Vesicles, 213
  
- w/o emulsion, 127
- Water-alcohol mixture, 231
  
- Zirconium oxide, 283
